

ABSTRACT OF THE DISCLOSURE

A method of using stored digital images transferred from an imaging device includes receiving and storing images from the imaging device in a memory associated with a computer, receiving at least one control file from the imaging device which indicates a prior intention for subsequent use of the stored images, and the computer responding to the control file to create and display a list of tasks selectable by a computer user in accordance with the prior intention. The method also includes the computer user selecting at least one of the tasks from the list, and the computer responding to the user selected task(s) to initiate the use of images indicated by the selected task(s).
